

# Digital Image Processing

## Lecture # 2D: Fundamentals

# Contents

- ◆ Neighborhood & Connectivity
- ◆ Connected Component Labeling
- ◆ Distance Metrics
- ◆ Arithmetic & Logical Operators

# Relationships between pixels

- ◆ Neighbors of pixel are the pixels that are adjacent pixels of an identified pixel

## 4- Neighbors of a Pixel – $N_4(p)$

What are the coordinates of each of the blue pixels

$(x-1, y), (x+1, y), (x, y-1), (x, y+1)$

# Diagonal Neighbors of a Pixel – $N_D(p)$

$(x-1, y-1), (x+1, y-1), (x-1, y+1), (x+1, y+1)$

# 8- Neighbors of a Pixel – $N_8(p)$

$$N_8(p) = \{p, (x-1, y), (x+1, y), (x, y-1), (x, y+1), (x-1, y-1), (x+1, y-1), (x-1, y+1), (x+1, y+1)\}$$

$(x-1, y), (x+1, y), (x, y-1), (x, y+1)$

$(x-1, y-1), (x+1, y-1), (x-1, y+1), (x+1, y+1)$

# Determine different regions in the image

# Connectivity

- ◆ Establishing boundaries of objects and components of regions in an image
- ◆ Group the same region by assumption that the pixels being the same color or equal intensity
- ◆ Two pixels  $p$  &  $q$  are connected if
  - *They are adjacent in some sense*
  - *If their gray levels satisfy a specified criterion of similarity*

# Connectivity

**V:** Set of gray levels used to define the criterion of similarity

**4-connectivity**

If gray level  ~~$(p, q) \in V$~~

Set of gray levels  $V = \{1\}$

# Connectivity

**V:** Set of gray levels used to define the criterion of similarity

**8-connectivity**

If gray level  $(i,j) \in V$  and  $(k,l) \in V$

Set of gray levels  $V = \{1\}$

# Connectivity

**V:** Set of gray levels used to define the criterion of similarity

**m-connectivity (Mixed Connectivity)**

If gray level

a.  $q \in N_4(p)$  or

b.

# Example: m – Connectivity

- ◆ Set of gray levels  $V = \{1\}$

Note: Mixed connectivity can eliminate the multiple path connections that often occurs in 8-connectivity

# Paths and Regions

- ◆ **Path:** Let coordinates of pixel  $p$ :  $(x, y)$ , and of pixel  $q$ :  $(s, t)$
- ◆ A *path* from  $p$  to  $q$  is a sequence of distinct pixels with coordinates:  $(x_0, y_0), (x_1, y_1), \dots, (x_n, y_n)$   
*where  $(x_0, y_0) = (x, y)$  &  $(x_n, y_n) = (s, t)$ , and  $(x_i, y_i)$  is adjacent to  $(x_{i-1}, y_{i-1})$   $1 \leq i \leq n$*

# CC labeling – 4 Connectivity

- ◆ Process the image from left to right, top to bottom:

1.) If the next pixel to process is 1

i.) If only one of its neighbors (top or left) is 1, copy its label.

ii.) If both are 1 and have the same label, copy it.

iii.) If they have different labels  
 – Copy the label from the left.  
 – Update the equivalence table.

iv.) Otherwise, assign a new label.

Pass 1

- ◆ Re-label with the smallest of equivalent labels

Pass 2

|              |       |
|--------------|-------|
| {1, 3, 4, 5} | 2, 7} |
| {6, 8}       |       |

# CC labeling – 4 Connectivity

# CC labeling – 4 Connectivity

# CC labeling – 8 Connectivity

Same algorithm but examine also the upper diagonal neighbors of  $p$

- Label 4

# Distance Metrics

- ◆ Let pixels  $p$ ,  $q$  and  $z$  have coordinates  $(x,y)$ ,  $(s,t)$  and  $(u,v)$  respectively.
- ◆  $D$  is a distance function or metric if
  - $D(p,q) \geq 0$  and
  - $D(p,q) = 0$  iff  $p = q$  and
  - $D(p,q) = D(q,p)$  and
  - $D(p,z) \leq D(p,q) + D(q,z)$

# City block distance ( $D_4$ distance)

$$D_4(p(x,y), q(x,y)) = |x - x'| + |y - y'|$$

- ◆ Diamond with center at  $(x,y)$
- ◆  $D_4 = 1$  are the 4 neighbors of pixel  $p(x,y)$

# Chessboard distance ( $D_8$ distance)

|   |   |   |   |   |
|---|---|---|---|---|
| 2 | 2 | 2 | 2 | 2 |
| 2 | 1 | 1 | 1 | 2 |
| 2 | 1 | 0 | 1 | 2 |
| 2 | 1 | 1 | 1 | 2 |
| 2 | 2 | 2 | 2 | 2 |

- ♦ Square centered at  $p(x,y)$
- ♦  $D_8 = 1$  are the 8 neighbors of pixel  $p(x,y)$

# Euclidean Distance

$$D(p, q) = \sqrt{(x-s)^2 + (y-t)^2}$$

A circle with radius  $r$  centered at  $(x,y)$

# Arithmetic Operations

- ♦ Carried out between corresponding pixel pairs

# Arithmetic Operations

- ◆ Conversion to range 0 – 255
- ◆ Difference of two 8-bit images: -255 to 255
- ◆ Sum of two 8-bit images: 0 to 510
- ◆ Solution?

Set all values  $< 0$  to 0

Set all values  $> 255$  to 255

Full range of arithmetic operation not captured

# Arithmetic Operations

- ◆ First perform the operation

$$f_m = f - \min(f)$$

Creates an image whose minimum value is 0

- ◆ Then perform

$$f_s = K[f_m / \max(f_m)]$$

Creates a scaled image  $f_s$  with values in the range [0 K]
